Bike Clip

Enhance your visibility on the road with this triangular reflective bike seat clip, a simple yet effective accessory for safer cycling. Designed to attach easily under most bicycle saddles, it positions the reflective surface at an optimal angle to catch and reflect car headlights, streetlights, and other light sources. This extra visibility helps alert drivers to your presence from a greater distance, reducing the risk of accidents. Whether you're commuting through city streets, riding on rural roads, or enjoying an evening leisure ride, this reflector offers peace of mind and an added layer of safety during night rides, dawn, dusk, or foggy weather conditions.

Why the EN 17353:2020 Standard Matters for Reflective Safety Products
Protecting Lives Through Visibility

Every year, thousands of pedestrians, cyclists, and road users are injured or killed in low-visibility conditions — many of these accidents could be prevented with proper visibility aids. That's where EN 17353:2020 plays a crucial role. This European standard defines the minimum performance requirements for enhanced visibility clothing and accessories intended for non-professional use in environments with medium-risk visibility conditions, such as walking, cycling, or jogging near roads.

What is EN 17353:2020?
EN 17353:2020 is the European safety standard for visibility-enhancing equipment designed to make people more visible in medium-risk scenarios — such as twilight, night, or poor weather — where full high-visibility workwear (like EN ISO 20471) might not be practical or required.

It replaces older standards (EN 1150 and EN 13356) by combining and improving the requirements for both garments and accessories, including vests, slap wraps, reflectors, armbands, keyrings, and more.

Key Requirements of EN 17353:2020
The standard outlines several product types and performance classes based on how the item is worn and used:

Type A: Daytime visibility (fluorescent only)
Type B: Nighttime visibility (retroreflective only)
B1 – small accessories (e.g., keyrings, slap wraps)
B2 – larger accessories worn on the body (e.g., soft/hard reflectors)
B3 – harness-like accessories
Type AB: Visibility both day and night (combination of fluorescent and reflective)

It sets precise requirements for:

Minimum surface area of reflective/fluorescent material
Placement and positioning of materials on the body
Reflective performance level (tested using standardized photometric methods)
Durability under conditions like cold, bending, washing, and UV exposure
